How to Embed a Flickr Slideshow on your webpage
Updated 11/22/2013

1. Go to the Flickr set that you want to embed on the webpage.

   ![Flickr screenshot](image1)

2. Add “show” after the set URL at the top:

   ![Flickr screenshot](image2)

3. Navigate over to the right hand side of the screen and click on “Share.” A window will open, click on “Customize this HTML”

   ![Flickr screenshot](image3)
4. Select one of the preset sizes or customize the size of the slideshow. If you’d like the Flickr slideshow to take up the entire page, type in 877 in the first box (the other box will change automatically to the correct proportions).

5. Copy the HTML in the box that appears below your slideshow. This is the code you will use to embed the slideshow.

6. Go to the webpage and the content area you want to embed the Flickr slideshow in. Make sure you are in the “CODE” view (not WYSIWYG). Type in the following code in front of the HTML you’ve pasted.

```
<embed src="http://www.flickr.com/apps/slideshow/show.swf?v=38195" width="877" height="658" />
```

7. Make sure you hit “Save and Publish” once you are ready to publish it on the webpage. If you have any questions during this process, email webmaster@gettysburg.edu.
