“Hello, my name is Math Modeling”

Thursday, September 20
11:30AM, Glatfelter 212

Math Models are everywhere! From identifying weather patterns to predicting elections to helping prevent the spread of disease; math models are used every day to help provide a better understanding of the dynamic processes that affect the world we live in. In this talk we will identify some common math models and will work together to develop a model to solve a problem.

**Warning: Attendance at this talk may result in you winning a (really cheap) prize!**
