“Working Elsewhere”

Thursday, February 9
11:30am, Glatfelter 112

This tutorial will demonstrate various techniques for doing your Computer Science work away from the classroom. Did you know that most of the software we use is freely available? You can have your own Java development environment on your computer. You can transfer files to and from the CS machines. You can connect to our machines and run your programs. You can display those programs across campus to your computer. We will cover the setup of some commonly used software and tools such as Java, bash, ssh, sftp and X11 on both Mac and Windows platforms.
