Network registration is required for all campus wireless networks including GBCWIFI. All computers and devices capable of running an Antivirus program will be checked for a valid Antivirus program with current definitions. If your computer or device has been previously registered, you will not be required to register again.

Registration procedures are summarized below. If you require platform specific step-by-step instruction including screen shots, please visit:

ITs How Do I Register my computer

**Computers**
Open your Internet Browser (IE, Firefox, and Safari). Read and follow the instructions carefully. For permanent access, log on with your Gettysburg College username and password. Other individuals must log on as a Guest and will receive time limited access. Download, install and run the temporary “agent” software that will check your computer. Ignore any warning messages: the agent is safe, temporary, and harmless. You will receive a success page if your device has a valid Antivirus program and definitions. If you receive a failure, please follow the links to install an Antivirus program of your choice and repeat the registration process.

**Smart Devices with a Web Browser (iPhones, Androids, Tablets, etc.)**
Open your smart devices browser. Read and follow the instructions carefully. For permanent access, log on with your Gettysburg College username and password. Other individuals must log on as a Guest and will receive time limited access. You will receive a success page once your device has been registered.

**Wireless Devices without a Web Browser**
From a registered computer, please visit ITs How Do I register my Kindle, Nook, etc.

**Game Consoles and Video Entertainment Devices**
Game consoles and video entertainment systems are not permitted on the wireless network. Please register these devices on the wired network by following the instructions posted on ITs How Do I register my gaming device, TiVo or Smart TV.
